

# VidyoVoice

VidyoVoice™ is a service that enables voice-only participants to join Vidyo conferences via their wire-line or mobile phones. Vidyo has reinvented video conferencing with its patented VidyoRouter™ architecture, making it more accessible than ever before with reliable performance over the error-prone Internet and wireless networks, and without the need for dedicated hardware – just PCs you already own. But even with these significant improvements in accessibility, we know there are still times when your laptop is not close at hand, you are in transit between locations, or you simply don't have broadband access at a scheduled meeting time. To ensure that no one is left out of the

discussion, VidyoVoice enables participants to dial into either a toll free or local access number to connect into a Vidyo user's room. It's convenient, easy, and just one more way Vidyo helps keep everyone in your organization connected and communicating.

## VidyoConnect at-a-Glance:

- Connects up to 10 concurrent land-line or mobile phones to any Vidyo user room on your VidyoPortal
- No additional equipment required
- Customizable auto-attendant greeting
- Single local access number in any one of the supported 39 countries
- Dedicated toll-free number in the US

## How VidyoVoice Works

Getting started with VidyoVoice couldn't be easier. Simply contact your authorized Vidyo Partner to place the order and that's it! Vidyo will provide you with either a toll free access number in the US or a single local access number in any one of the supported countries that your voice-only participants will dial to access the service. Once greeted by the auto-attendant, the user will input the number of the Vidyo room she or he is trying to reach. If you prefer to customize the auto-attendant message, you can record the message and send it to Vidyo, otherwise the pre-recorded default will be activated.

For v2.0 or later VidyoDesktop client users, this number is readily available on the client screen itself and is automatically included in guest invites sent from the VidyoPortal. For earlier versions of VidyoDesktop, the number can be found on the "Browse Meetings & Users" tab by searching for your own name. VidyoRoom™ users can find their extension under "settings."

Now you can dial in from your mobile or wire-line phone and connect to any Vidyo user's virtual conference room via a local access or toll-free number.

## Features, Specifications & Capabilities

### VIDYO SYSTEM REQUIREMENTS

VidyoPortal must be accessible from the Internet

### CAPACITY

Up to ten (10) concurrent voice only connections per purchased access number

### COMPATIBLE AUDIO-ONLY ENDPOINTS

Land-line POTS phones
