

# Vidyo for Professional Development

## What are Your Needs?

- Do you need to offer more professional development opportunities to your teachers?
- Are travel and substitute teacher costs limiting the PD available?
- Do new teachers ask for opportunities to extend their skills?
- Do you provide an effective system for mentoring and leadership development?
- Do your teachers need exposure to new metrics being implemented in the district?

Ensuring the quality of America’s 3.2 million teachers is tantamount to providing a quality education to our youth. Studies show that teacher quality is the primary school-related factor affecting student achievement. Students who are taught by effective and competent teachers excel quickly, while students assigned to the least effective teachers lag behind.

### At Issue

### The Vidyo Solution

**The need to measure each teacher’s competencies in order to offer the appropriate professional development program**

Vidyo can connect teachers and administrators from across a district, region or state with professional development experts located anywhere in the country. This reduces travel time and costs and allows providers and teachers to pursue development programs from their own campus locations.

**The need to keep teachers and administrators up to date on new procedures and plans for school improvement**

Schools and districts undertaking extensive school improvement or turnaround plans must disseminate information about the new policies, procedures, metrics, and approaches. Working groups and train-the-trainer activities are easy to manage over Vidyo

**The need to provide support networks for teachers and administrators**

Vidyo provides a straightforward and cost-effective way to conduct one-on-one or team teaching sessions between new teachers and their mentors. Participants can be located anywhere, and there’s no requirement for custom-built video conferencing set-ups.

**The need to enable teachers to further their own education**

Every year colleges and universities are expanding their graduate degree programs with flexible distance learning options that rely on video conferencing. For teachers, it means access to high quality and affordable programs they can pursue after school hours using standard mobile or desktop devices.
