

Vidyo for Virtual School Education

What are Your Needs?

- Are your students engaged in the classes and activities you currently offer?
- Do your students need access to classes that you currently do not offer?
- Do your students have the opportunity to advance at the pace that best works for them?
- Do you have the ability to build study and project teams that have the time necessary to work together?
- Do your students have a choice in how they access a class and what classes they access?

Every year, Virtual Schools and Virtual Classrooms give students and teachers greater access and more choices for full- or part-time teaching and learning opportunities. It's a practical approach to education that brings together qualified teachers with youth who may be working students, live in rural areas, or be in need of advanced or remedial courses beyond what their school can offer.

At Issue

The Vidyo Solution

The need to provide students with access to the right curriculum and learning environment

Use Vidyo to connect students with innovative content providers that bring subjects to life. Virtual tours and fieldtrips can expose students to learning opportunities beyond classroom walls. With Vidyo, students can use everyday mobile, desktop or room-based devices and a simple Internet connection to participate in a virtual learning experience.

The need to support blended learning environments

Vidyo makes it easy to establish blended learning environments with virtual classrooms in which high quality video and audio promote interaction and content sharing that integrates smoothly with traditional classroom workflow.

The need to create learning opportunities for advanced students

Vidyo can increase student access to AP, Honors, Credit Recovery, Dual Enrollment and other courses offered remotely by teachers at other schools. This extends the learning opportunities for motivated students while helping schools to be competitive, staff effectively and keep costs in line with budgets.

The need to provide students with collaborative learning experiences

Vidyo can be used to facilitate interactive study and project teams that are local or global in makeup. This collaborative component to learning is essential for students primarily enrolled in online lecture courses with minimal exposure to team-building activities.
